## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jocelyn Ram on January 13, 2009.

The application has been amended as follows:

Cancel Claims 6-9 and 11-15.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

In light of Applicant's amendments, Claims 1-5 are allowed as patentably distinct over the closest prior art of record. The closest prior art of record is Bolton et al. (US 7,335,399) and Aoyama et al. (US 5,498,670)

Regarding Claims 1-5, Bolton et al. (US'399) teach a method of painting a substrate with an emulsion paint to simulate wood grain, comprising the steps of applying an opaque layer ("base coat") to a substrate and applying a pigmented emulsion paint over the opaque layer (Abstract). US'399 teaches applying the pigmented emulsion paint in a semi-opaque layer, painting lightly and/ or sparingly onto

Art Unit: 1792

the substrate in an amount sufficient to replicate a wood color, to provide darkening color to texture recesses in the substrate, and not to obscure the color of the underlying coat (col. 8, lines 42-49; col. 8, line 64 - col. 9, line 11; col. 7, lines 6-11). The colors of the opaque and the semi-opaque layers are selected so that they are of a corresponding color, i.e., should be compatibly selected or "relate to each other," so as to provide a brilliance of color and for faithful reproduction of the desired wood coloration (col. 9, lines 22-29). US'399 teach that the opaque layer is made of an aqueous pigmented primer, which should comprise *styrene-free* acrylic binder ("crosslinkable acrylic polymer") (col. 5, lines 1-8).

US'399 is silent as to the particle shape or size distribution. Aoyama et al. (US'670) teach a method of forming an emulsion paint for producing a suede, leather-like, or velvet-like appearance with spherical particles with an average particle diameter of 1-100 microns, which may be produced with a broad or with a narrow particle size distribution (col. 11, lines 10-40). US'670 does not teach or fairly suggest modifying US'399 for simulating wood grain with US'670 for producing suede textures.

No other prior art that anticipates or suggests fairly the instant claims has been located as of the date of this office action. Therefore, Claim 1 is allowed over the prior art of record. Claims 2-5 are allowed as depending from the allowed independent claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
